Teague Leon Krier James Armitage Charles Jencks*

leon krier is one of the best known and most provocative architects and urban theoreticians in the world until now however his ideas have circulated mostly among a professional audience of architects city planners and academics in the architecture of community krier has reconsidered and expanded writing from his 1998 book architecture choice or fate here he refines and updates his thinking on the making of sustainable humane and attractive villages towns and cities the book includes drawings diagrams and photographs of his built works which have not been widely seen until now

this polemic is essential reading for anyone concerned with the state and direction of architecture and urban planning today and will provoke wide ranging discussion

drawings doodles and ideograms argue with ferocity and wit for traditional urbanism and architecture architect léon krier s doodles drawings and ideograms make arguments in images without the circumlocutions of prose drawn with wit and grace these clever sketches do not try to please or flatter the architectural establishment rather they make an impassioned argument against what krier sees as the unquestioned doctrines and unacknowledged absurdities of contemporary architecture thus he shows us a building bearing a suspicious resemblance to norman foster s famous london gherkin as an example of priapus hubris threatened by detumescence and priapus nemesis he charts random uniformity fake simplicity and uniform randomness fake complexity he draws bloated bulimic and disproportionately scrawny anorexic columns flanking a graceful classical one and he compares private virtue modernist architects homes and offices to public vice modernist architects creations krier wants these witty images to be tools for re founding traditional urbanism and architecture he argues for mixed use cities of architectural speech rather than architectural stutter and pointedly plots the man vehicle land need ratio of sub urban man versus that of a city dweller in an age of energy crisis he writes and his drawings show we build in the wrong places in the wrong patterns materials densities and heights and for the wrong number of dwellers a return to traditional architectures and building and settlement techniques can be the means of ecological reconstruction each of krier s provocative and entertaining images is worth more than a thousand words of theoretical abstraction

leon krier s most important essays and all his projects including his proposals for poundbury near

dorchester and masterplans for luxemburg s new quarter and washington dc and the new town of atlantis on the island of tenerife have been brought together in this work

one of the most interesting questions in architectural history is why modern architecture emerged from the war ravaged regions of central europe and not the united states whose techniques of mass production and mechanical products so inspired the first generation of modern architects like le corbusier mies van der rohe and walter gropius in from autos to architecture historian david gartman offers a critical social history that shows how fordist mass production and industrial architecture in america influenced european designers to an extent previously not understood drawing on marxist economics the frankfurt school and french sociologist pierre bourdieu from autos to architecture deftly illustrates the different class structures and struggles of america and europe examining architecture in the context of social conflicts from autos to architecture offers a critical alternative to standard architectural histories focused on aesthetics alone

makers of 20th century modern architecture is an indispensable reference book for the scholar student architect or layman interested in the architects who initiated developed or advanced modern architecture the book is amply illustrated and features the most prominent and influential people in 20th century modernist architecture including wright eisenman mies van der rohe and kahn it describes the milieu in which they practiced their art and directs readers to information on the life and creative activities of these founding architects and their disciples the profiles of individual architects include critical analysis of their major buildings and projects each profile is completed by a comprehensive bibliography

this book explores the broad issue of postmodernism and tells the story of the movement that has changed the face of architecture over the last forty years in this completely rewritten edition of his seminal work charles jencks brings the history of architecture up to date and shows how demands for a new and complex architecture aided by computer design have led to more convivial sensuous and articulate buildings around the world
