this book is essential reading for anyone engaged in the multi billion dollar marina industry everyone whether experienced marina operator designer developer or indeed anyone with an interest in refurbishing an existing property will find a wealth of information within the chapters readers are provided with a snapshot of the marina industry today and a look at tomorrow's information technology developments that will be pivotal to the success of the marina of the future it gives detailed information on what a marina developer designer should consider when designing a new marina in addition to compiling data that will be not found elsewhere including global marina maps showing 17300 marinas the book explores in some depth the environmental issues in siting and designing marinas this book is been used as the primary textbook by the university of izmir for the 2 year course marina management and sustainability

the existence and qualitative properties of nontrivial solutions for some important nonlinear schrödinger systems have been studied in this thesis for a well known system arising from nonlinear optics and bose einstein condensates bec in the subcritical case qualitative properties of ground state solutions including an optimal parameter range for the existence the uniqueness and asymptotic behaviors have been investigated and the results could firstly partially answer open questions raised by ambrosetti colorado and sirakov in the critical case a systematical research on ground state solutions including the existence the nonexistence the uniqueness and the phase separation phenomena of the limit profile has been presented which seems to be the first contribution for bec in the critical case furthermore some quite different phenomena were also studied in a more general critical system for the classical brezis nirenberg critical exponent problem the sharp energy estimate of least energy solutions in a ball has been investigated in this study finally for ambrosetti type linearly coupled schrödinger equations with critical exponent an optimal result on the existence and nonexistence of ground state solutions for different coupling constants was also obtained in this thesis these results have many applications in physics and pdes

aqueous solutions of ferrous ammonium sulfate with cupric chloride were studied as a means for determining the uniformity of the dose rate around a multikilocurie cylindrical array of cobalt 60 ferric ion was measured spectrophotometrically at 305 millimicrons the solution selected to satisfy the requirements for dosimetry contained 0.0005 m ferrous ammonium sulfate and 0.005 m cupric chloride in 0.001 n sulfuric acid spectrophotometric measurements of ferric ion were made in solutions brought to 0.15 n acid concentration instead of the conventional 0.8 n in order to minimize spurious oxidation the molar extinction coefficient at this normality proved to be the same as that in 0.8 n solutions the g value as compared to the standard ferrous ferric dosimeter was 0.65 using these solutions no detectable variation in dose rate was found at symmetrically equivalent positions at the center of the cobalt 60 source the average dose rate at each end of the cylindrical array proved to be 12 percent lower than that at the center the dose rate was also less uniform at the ends varying by 4 percent from point to point at a distance of fifteen inches from the center of the source array the dose rate decreased as the square of the distance author
